

Sales Action "Cabinet Applications"

M23 Receptacles and Wall Bushings

Automation plays an increasing role in a modern manufacturing environment. All sizes of businesses are facing similar challenges.

CONINVERS offers a huge amount of circular connector products comprising about 64000 parts to address M23 applications in many different business fields.

The product portfolio ranges from cable connector plugs, extensions and, particularly, to all kinds of receptacles and cable connecting receptacles for either front or rear mounting, known as "flanges".

Unique scope of product variants

This positions CONINVERS very well in the surroundings of electric cabinets. The number of different flange styles is a specific strength of CONINVERS and should enable you to leverage on that unique feature.

We think you should make yourself aware of this!
