

## New manual crimping pliers for machined RC/SC/SI crimp contacts

Effective immediately, the RC-Z2378 crimping pliers will be replaced by the new RC-Z2504 manual crimping pliers. These will be available in the warehouse starting in calendar week 40, 2007.

The new 4-arbor crimping pliers represent the state of the art of crimping technology. Especially outstanding is the exact setting of the crimping depth with a precision of 0.01 mm.

**A considerably improved crimping quality is achieved this way.**

The crimping pliers are designed to be ergonomically advantageous, easy to handle and can be operated with little force. Detailed operating instructions are included in the packaging.

The price is the same as the previous crimping pliers. Coninvers will provide the same services as they did for the "old" RC-Z2378 crimping pliers.

**The new RC-Z2504 4-arbor crimping pliers** (at right in figure) will replace the previous RC-Z2378 crimping pliers.
