

Pneumatic tabletop crimping tool for machined SF / SM crimp contacts

The pneumatic tabletop crimping tool with the designation **SF-Z0043** is now available as an alternative to the manual crimping pliers SF-Z0025. The crimping tool offers considerable time savings and easy operation, especially when crimping large quantities and/or large connection cross sections.

Compressed air at 6 bar operating pressure is required to operate the tabletop unit. The crimping operation is triggered using little force by means of a hand or foot switch.

The tabletop crimping tool uses the same crimping head (locator) as the manual crimping pliers. The setting parameters for machined crimp contacts of the series SF and SM for connection cross sections from 0.14 mm² to 6 mm² apply similarly.

Detailed operating instructions with crimp settings are included in the packaging.

New pneumatic tabletop crimping tool SF-Z0043 for machined crimp contacts of Ø 1 mm, 2 mm and 3.6 mm
